1.0 Windows SMTP server

I tried several times to do it with windows server, but it didn't work.

I decided to install H mail server

1.1 install SMTP

Setup - hMailServer	- • × Welcome to th@hMailServer Setup Wizard					
hMailServer	This will install hMailServer 5.6.8-B2574 on your computer. It is recommended that you close all other applications before continuing. Click Next to continue, or Cancel to exit Setup.

To install HMailServer, you must go on internet and type ".NET framework" once downloaded, you have to go on windows server and install the features.

elect features	is a pending restart. We recommend that you restart the	destination	DESTINATION SERVER WIN-PKBOGGQMUSM
Before You Begin Installation Type	Select one or more features to install on the selecte Features	d server.	Description
Server Selection Server Roles Features Confirmation Results	INET Framework 3.5 Features (1 of 3 installe INET Framework 3.5 (includes .NET 2.0 a HTTP Activation Non-HTTP Activation Non-HTTP Activation INET Framework 4.8 Features (3 of 7 installe Background Intelligent Transfer Service (BIT BitLocker Drive Encryption BitLocker Network Unlock BranchCache Client for NFS Containers Data Center Bridging Direct Play Enhanced Storage Failover Clustering Group Policy Management Host Guardian Hyper-V Support K	ed) (cd) (S)	NET Framework 3.5 combines the power of the .NET Framework 2.0 APIs with new technologies for building applications that offer appealing user interfaces, protect your customers' personal identity information, enable seamless and secure communication, and provide the ability to model a range of business processes.

for the configuration it is very simple, you have to uncheck everything except SMTP in the protocols. And in the IP range, you have to add the IP of the PC, so I went on my computer, and I opened "CMD" and used the command "ipconfig". And unchecked everything in Require SMTP authentication

		Exit	

1.2 To one recipient

We start by greeting the server with the command "HELO text" you can put what you want instead of text.

Then we continue with the command "MAIL FROM:" here, you can also put what you want.

Then we put the command "RCPT TO:". This time you have to put the correct address of the recipient.

Enter the DATA command

A very important step, you have to enter the command "FROM:" and put the email with which you want to send your email.

Then with the command "SUBJECT:" this command is used for the subject, then we do ENTER and you can write your email. Once finished you enter a dot and press ENTER and the mail is sent.

← Reply → Forward

1.3 To many recipients

This is the same process as the previous step, except this time I added a new recipient as well, so I had to use two the command "RCPT TO:"

1.4 Joke

I sent an email to my cousin, pretending to be "Nestle". I gave him an appointment for a job interview for the digital marketing position.
